

**Title:** Fast Medicine Delivery.

**Objective:** We want to develop a system that is capable to

- Finding pharmacies in customers region so they can get their medicine as fast as possible.
- Customer can get their medicine by a fair price.
- Pharmacies can expend their business from any place.

**Expected Outcome:**

**Customer:**

- Customer can search and find nearest pharmacy so they can get their product fast.
- Price of medicine will be visible so they can measure from different shop.
- Pharmacy rating will also be provided so customer can compare the quality.
- Customer need to sign up for place an order.

**Pharmacy:**

- Pharmacy vendors can create their profile using the shops region and necessary details from any place by super admin.
- Admin can add delete or update their medicine stock info.
- Vendors will not receive orders from different regions then its own.
- Vendors can be in online, busy or offline state for delivery facilities.

**Work status:**

Sir, we are sorry to inform you that we could not do any update on the project because of present pandemic. We had plan to perform on the project by a training that we were doing on new-horizon training center but because of present situation the training is close and also we don't have device and platform to do something for it.

So, please consider our situation.
